The Importance of Post-Closure
Development of Coal Mines in the Context of the Just Transition

Towards Resilient Futures Community of Practice II
Use of Fibre-rich Biomass in the Remediation of
Degraded Mining Land
25 November 2021

The Just Transition challenge

NPC agreed meaning of JT

- SA subscribes to the ILO guidelines on JT (worth a read!)
- The NPC Just Transition Vision covers mitigation and adaptation, across the energy, water and land use sectors to address implementation of JT (NPC, 2020).
- Vision 2050 states: "Through putting people, especially those living in poverty and the vulnerable at the forefront, South Africa will have achieved a zero-carbon [net-zero carbon] economy by 2050. We have built the resilience of our economy and our people through affordable, decentralised, diversely-owned renewable energy systems; conservation of our natural resources; equitable access of our water resources and sustainable, equitable and inclusive land-use for all, especially for the most vulnerable. The high value we place on healthy ecosystems, land, water and air, underpins our future, and ensures a better life for all who live in South Africa." (NPC, 2019).

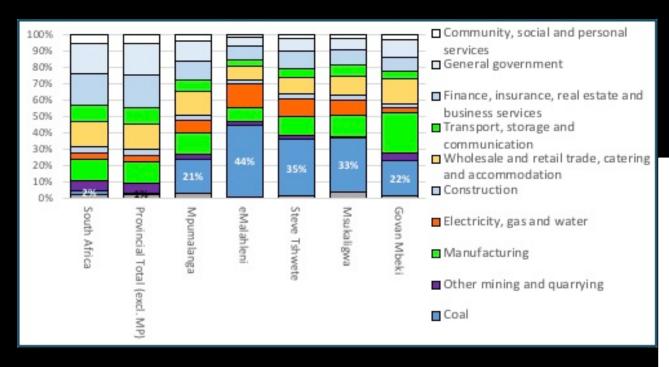

Mpumalanga's development challenges

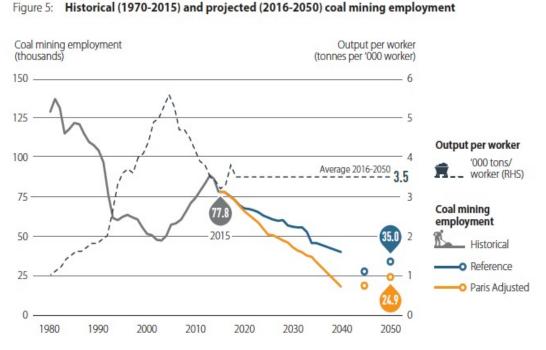

- Unemployment levels are above the national average at 35.2% and 46.5% (StatsSA,Q2 2021).
- Youth unemployment rate is 58.7% in 2021 and 66.5% for young women
- Mining-affected communities
- Air & water pollution, degraded land "most polluted catchment" in SA; highest Sox and Nox
- Failed social and enviro closure processes in mining ->700 abandoned mines
- Competition for land, water from coal
- Household dependence on coal is high and informal economy
- In 2019, 47.3% of Mpumalanga population lived below the lower-bound poverty line of R810 per month (\$54/46 Euro/40 pounds/month)

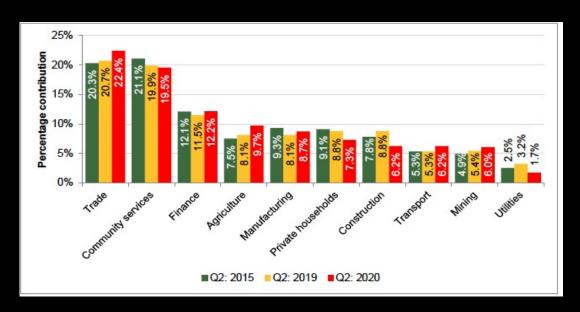

Just Transition challenge: fossil fuel dependence AND broader development

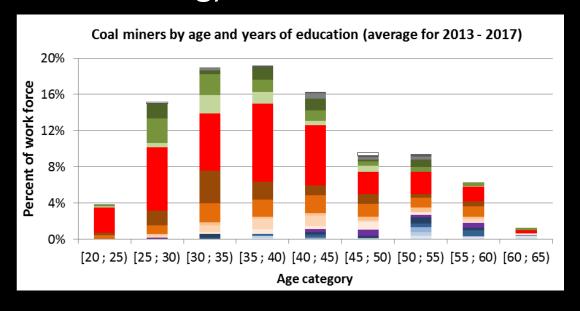

Employment vulnerability in regions – advancing analysis

 In eMalahleni, Steve Tshwete, Msukaligwa and Govan Mbeki, coal employment accounts for 26%, 17%, 14% and 11% respectively (TIPS, 2020)

 But age, skills, retirement, health all matter a lot for how many workers will actually lose their jobs between now and 2050 (Schers and Burton, forthcoming)

South Africa's updated NDC range

What do ambitious electricity pathways look like?

		IRP			Coal Off 2040		Climate Policy lowNDC		
	2030	2040	2050	2030	2040	2050	2030	2040	2050
Coal %share of electricity	52%	25%	16%	41%	0%	0%	37%	0%	0%
Coal installed capacity GW	33,8	19,6	11,4	30,3	0,0	0,0	28,25	0	0
Coal installed capacity %	41%	16%	7%	29%	0%	0%	31%	0%	0%
Wind and Solar share of elec %	30%	60%	72%	48%	85%	90%	45%	82%	87%
Wind and PV installed capacity GW	34,3	77,0	107,4	60,2	118,0	141,3	44,88	107,46	142,89
Wind and PV installed capacity %	42%	61%	70%	58%	76%	78%	49%	64%	66%
Greenhouse gas emissions powerl Mt CO2eq	149,9	82,1	61,4	119,6	6,4	10,0	111,21	15,93	19,61
GHG emissions national Mt CO2eq							353,24	163,29	163,73

CSIR/Meridian and ESRG, UCT

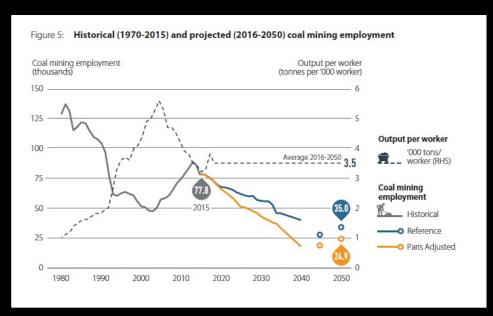

This goal requires at least 15GW more wind and solar above IRP and NEES, GTS implementation

3.5-5.5GW faster coal plant retirement, and lower operating hours: what does this mean for coal supply and mining revenues? Which mines? Severe data issues. Risk that it exacerbates existing rehab failure§?

What does climate ambition mean for workers and communities?

- Moving from slower phase down to 2040 coal phase out means increasing "forced job losses" in coal mining from <3000 to ~25 000
- But this is masking the "below retirement age" workers who are exiting – this needs attention AND declining coal destroys new hires in the sector
- Many of these workers are essentially not re-employable in other sectors due to age/educational attainment/health/lack of alternative jobs
- There are indirect impacts in towns that are not yet well understood (eg related mining services companies, small business), as well as transporters (truckers), informal related business (food etc), and general economic activity in Mpumalanga towns
- Economic diversification is thus key for small business, youth who are excluded currently, and younger workers
- Labour market policies for all workers
- Social protection and service delivery

Reference case (still faster than IRP and includes some air pollution compliance...)

Burton, et al, 2019

5 year period job changes in coal mining under a least cost future: lack of new hires Implication – need local economic diversification and employment opportunities for young workers (and unemployed)

		2021 to	2026 to	2031 to	2036 to	2041 to
		2025	2030	2035	2040	2045
Leas	st cost energy future reference scenario					
	Employment at the end of period	65 255	58 769	48 469	42 826	31 877
	Retirements, at	987	1 145	1 398	1 267	1 988
	Early retirements not BAU	-	-	-	-	-
	"BAU" people leaving the workforce	6 242	7 192	7 712	9 814	10 176
	Additional job losses	1 660	0	1 190	0	0
	Composition of (non retiring) work force leavers :					
	Total	7 902	7 192	8 902	9 814	10 176
	Not reemployable	3 890	3 447	3 545	3 573	3 565
	Low to very low chance of reemployment	2 083	2 084	3 195	3 918	4 293
	Average (or quite some) difficulty in finding reemployment	1 242	1 651	1 871	2 320	2 317
	Little to no problem to find a new job	687	11	292	3	1
	check	0	0	0	0	0
	New hires	0	1851	0	5438	1 216

Regular turnover of employment due to (we think) illness/workers exiting before retirement

With limited early coal retirement – impact hits new hires, not existing workforce

Very limited "forced job losses" due to coal retirement over the period Schers & Burton, forthcoming

Job changes in coal mining under an Accelerated transition scenario

 A lack of new hires, and higher job losses in all re-employability categories: broader economic development and greater worker support.

25 000
forced job
losses
between
2020 and
2040 - and
early
retirement at
55yrs can
more than
halve job
losses

Schers & Burton, forthcoming

The Just Transition opportunity

Just transition planning

- Civil society processes with communities and workers
- Labour processes on climate and Just Transition
- Presidential Climate Commission JT Framework
- National, provincial and municipal strategies -
- Emalahleni and Steve Tshwete and districts
- Eskom JET Office
- NBI and BUSA just transition to net zero process
- Mpumalanga Green Economy Cluster and strategy: agri, water, energy
- Impact Catalyst supported by mines looking at post-mining economies

Just Energy Transition Partnership

Potentially historic deal - \$8.5bn offer from international donor group (US, UK, DE, FR, EU)

CIF ACT as core (\$200-500m) Initial 3-5years

View to a longer-term partnership

Focused heavily on JT/social justice, power sector decarbonization, electric vehicles, and green hydrogen

The detailed plans are not yet in place – opportunity to shape what is demanded

Importance of mine closure related elements as part of financing packages - core to JT outcomes incl restorative justice, management of social consequences, livelihoods

What about access to modern energy services? Energy poverty more generally, coal use in hhs, etc?

Eskom Just Energy Transition Office

- Eskom goal is "net zero emissions by 2050 with an increase in sustainable jobs"
- Repurposing options at aged plants
- JET Transaction climate finance deal to accelerate coal closures (~1Gt of CO2 reduction) and re-finance Eskom debt

Concept description:

Eskom's JET Financing Facility

To enable and accelerate the Just Energy Transition from coal to other forms of electricity generation, we propose:

- a multi-tranche, multi-year facility, funded by a multi-lender syndicate,
- The Facility will provide concessional funding to JET projects in the Republic of South Africa on a "pay for performance" basis.
- The funds will be advanced as progress payments for different stages of various projects

Thank you

Jesse.Burton@uct.ac.za

Jesse.Burton@e3g.org

Foundational costs for Mpumalanga transition programme: Just Transition Fund via a Just Transition/climate finance deal

Where should this funding come from? How could this best be coordinated? Which stakeholders need to be involved?

- These costs of catalysing a comprehensive transition programme are small:
 - when compared to the costs associated with nottransitioning in a pro-active manner (Eskom bail outs, provincial social grants etc).
 - when compared to international transition financing we believe could be generated under an Ambitious scenario.
- These costs are non-exhaustive, however, they give some indication of the costs of foundational components of a transition programme.

~? Funding for mining rehabilitation and new value chain pilot projects

R1.6 Bn to finance the establishment of a renewable energy SEZ in Mpumalanga and revitalise existing industrial parks, to attract a mixture of private as well as cooperative, community-led local industries.

~R8.8 bn to finance worker support mechanisms over 20-year transition

R1.5 Bn to fund enabling infrastructure for skills development, land rehabilitation and other basic public infrastructure in 4 most affected municipalities.

Spectrum of ambition, types of justice, and pillars

Figure 7: Continuum of possible interventions to enact restorative justice

- Ramp up sustainable, resilient housing in affected regions
- Ramp up access to and quality of public services (energy, water, sanitation, etc.) in affected regions
- Widen pro-poor support for sustainable services (energy, water, sanitation, etc.) in affected regions
- Promote broad-based employment, ownership and control of new economic activities, including through BBBEE requirements
- Enforce environmental policy and regulations (land, biodiversity, water, air, carbon, waste)
- Invest in, support investment in and enforce requirement for land (mine) rehabilitation and environmental remediation (e.g. water)

- Strengthen universal access to and quality of community services (education, health, etc.) for vulnerable stakeholders, with a focus on affected regions
- Invest / support investment in an inclusive rollout of 'green' technologies (e.g. renewable energy, efficient appliances, emobility, next-generation sanitation)
- Transfer equity in housing to long-term renters in relevant sectors (farmworkers, mineworkers)
- Redistribute former mining land to enable new activities
- Develop and implement methodology to value natural capital
- Revise requirements for SLPs and rehabilitation plans to extend to other key activities (e.g. smelters and refineries)
- Ensure stakeholder participation in design and implementation of SLPs and rehabilitation plans, including communities and workers

- Extend improved public services and pro-poor support to all communities
- Enable social ownership of productive assets
- Support for social economy projects, programmes and enterprises, including public employment schemes, food gardens, consumer co-ops and housing co-ops
- Implement interventions to internalise the social cost of carbon
- Achieve the restoration of land rights, through land reform and redistribution, and support to emerging farmers
- Completely internalize natural capital valuation in government processes, notable leading to non-predatory use of land
- Explicitly include the need to address climate-change related downsizing and the need for a just transition in SLPs

Source: Author

Figure 5: Continuum of possible industrial policy interventions to enact distributive justice

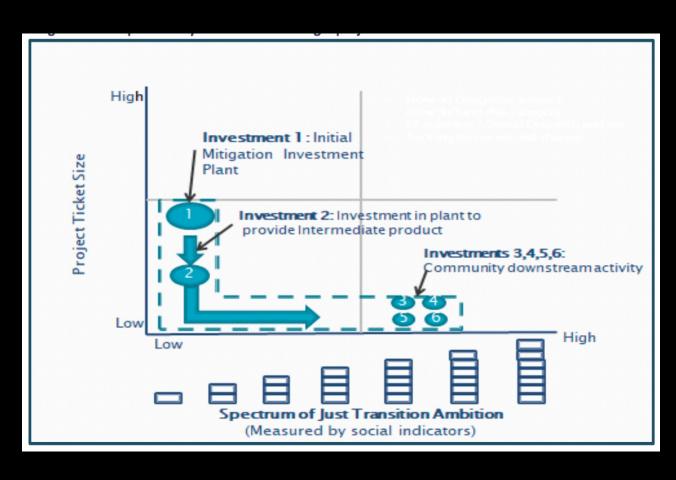

- Internalise just transition in sectoral plans (e.g. Master Plans) for traditional value chains, through decarbonisation of energy supply and transport
- Phase out support and subsidies to fossil fuels and other harmful activities
- Ramp up carbon pricing, in scope and value, and integrate it into a coherent climate change framework
- Implement measure to stimulate local demand for new 'green' products
- Develop forward-looking plans for economic diversification / rejuvenation in affected regions (e.g. coalfields, platinum belts, low-lying areas)
- Improve logistics and market information for affected regions to forge new relations with other value chains
- Develop forward-looking plans for affected sectors (agriculture, tourism, etc.) and regions (coastal areas, etc.) to mitigate or adapt to physical impacts (including monitoring and early-warning systems)

- Internalise just transition in sectoral plans for traditional value chains, notably through measures (R&D support, technology transfer, etc.) to optimise production processes (energy, water, waste, carbon) for low-carbon and climate resilience
- Ramp up the share of existing (public) support to new sustainable activities
- Promote broad-based employment, ownership and control of new economic activities, including through BBBEE requirements
- Establish dedicated support for impacted regions to foster investment (e.g. SEZ, REDZ, regional fund)
- Invest / support investment in enabling infrastructure (e.g. smart grids, rail, electric charging stations)
- Implement compensation and/or insurance mechanisms for loss of economic activity (e.g. agriculture, tourism)

- Complete shift to 'green industrial policy', including full alignment with climate policy
 - Develop and implement Master Plans for new economic activities and accelerate measures to incentive the rollout of new 'green' technologies
 - Implement comprehensive 'green' and 'just' fiscal reform, including review of administered prices and review of municipal financing model
 - Implement interventions to internalise the social cost of carbon
 - Develop new clusters with links to national, regional and global value chains
- Provide dedicated support for affected sectors (e.g. investment support, technological upgrading)
